

Georgia Institute of Technology

NEUR 4001: Neuroscience Research

Project Capstone Course, Summer 2026

Class times: M/W 11:00-12:15pm, In-person Lecture: CULC 341
M/W 12:30-4:45pm, In-person Lab: CULC 341
Occasional changes will be announced on Canvas.

Prerequisites: NEUR 3010

Instructor: Timothy Cope, Ph.D.

Instructor: Kathy Bui, Ph.D.

We are happy to help anytime with an appointment scheduled via email!
Instructor and TA office hours and contact information are also listed on the Canvas course page.

Course Description & Learning Objectives

The purpose of this course is to familiarize you with the methods and processes used by neuroscientists to generate scientific research. Over the course of the semester, you will gain an understanding of the process of research – from generating research questions, developing a testable hypothesis, evaluating the existing literature, data collection and analysis, interpretation of results, and communicating findings to others in oral and written form. **Our main objective is to increase your confidence in scientific literacy to help you as a consumer and generator of knowledge in life and in your future profession.**

At the end of the semester, you will be able to:

- Articulate strengths and limitations of various research designs
- Locate and utilize primary literature to identify experimental designs and essential background information
- Formulate testable research hypotheses and generate tests or experiments based on operational definitions of variables

- Follow the APA Code of Ethics in the treatment of human and nonhuman participants in the design, data collection, interpretation, and reporting of neuroscientific research and follow proper biosafety procedures
 - Evaluate the appropriateness of conclusions derived from research outcomes
 - Identify when and where to use specific statistical tests and interpret basic statistical results
 - Communicate scientific knowledge in written, graphical, and oral format and recognize importance of accurate reporting of methods and data for replication studies
 - Critically evaluate classmates' research design and presentations
 - Work collaboratively toward shared research goals
-

Course Requirements

Required readings

There is no textbook for this course. This syllabus is required reading.

This course introduces you to foundations of research in neuroscience. Readings will be posted on Canvas and should be read before class so that you are prepared to contribute to the class discussion.

Computer and Internet

A computer and a stable internet connection are required to be able to access course materials and to submit assignments. Please contact us if you need any assistance in accessing the course.

Communication

This class will communicate via Canvas and through your Georgia Tech email address. Please check your GT email address regularly so you do not miss any updates and announcements. **If not emailing directly via Canvas, please indicate your course and section number in the subject line.** The instructor and/or TA will do their best to reply to your emails within 24 hours during the school week. **To stay organized, we will not accept assignments via email.** We would like for you to have a support system for this course, so please communicate with your classmates, instructor, and TA early and often.

Canvas and Student Technology Support

This course utilizes Canvas, a virtual learning management system. Canvas is compatible with all browsers and works with your phone. You may consider downloading the app for your phone to receive notifications and alerts for your courses. Verify your email settings are set to forward your GT email address, and make sure you are receiving emails from the system.

GT Canvas site: <https://canvas.gatech.edu/>

GT Canvas app for students: <https://community.canvaslms.com/t5/Canvas-Basics-Guide/What-is-the-Canvas-Student-app/ta-p/31>

Need Microsoft Office? Get access to the FREE cloud-based version of Office 365 by visiting the GT Office 365 website and using your GT email address.

GT Office 365 Website: <http://portal.office.com>

Need tech help? Contact the Office of Instructional Technology with any technology questions or connect in the Virtual Help Desk.

Course Policies

Make-up Policy

Late assignments will lose 10% per day off the final grade and will not be accepted after one week past the due date. For extensive illnesses and emergencies, contact the Office of the Vice President and Dean of Students who can inform and work with your instructors.

<https://studentlife.gatech.edu/request-assistance>

Federal Regulations on financial aid require all faculty to document last date of attendance for students who are not participating in classes. If a student has stopped participating in class, then the student's name must be sent to the Dean of Students. If prolonged illness or death in the family occurs, speak with the instructor about withdrawing from the class. In extreme conditions an incomplete may be approved at the discretion of the instructor using guidelines outlined by the Office of the Registrar.

Attendance Policy

This course is a hands-on lab course, and students are expected to fully participate and engage each week. In-class participation is calculated as part of your final grade (see grading table below). The instructor will work with students who have obtained Institute Approved Absences (IAAs) or official documentation from the Dean of Students to provide reasonable accommodations for missed work when possible.

Course Engagement

Student engagement in coursework and class activities is essential for learning and student success. In addition, to comply with federal mandates related to financial aid, the university is required to track attendance and engagement in course activities. Meaningful engagement in a course goes beyond logging into Canvas and may include engaging with learning materials, participating in learning activities, completing assessments, and interacting with classmates and/or the instructor. You are expected to be actively engaged in the course activities explained in this syllabus, just as the instructor and TA promise to be actively engaged, as well. To maintain professionalism and ensure positive interactions and continued collaboration within your group, it is critical that you communicate timely with your group members to inform them of any absence or tardiness.

Academic Honesty and Integrity

Your instructors take academic integrity very seriously. Cheating, in any form, interferes with your success. As science is collaborative by nature, you are absolutely permitted to discuss ideas,

results, and work with other people. However, **all work you submit must be your own and in your own words**. If you turn in another's work as your own, **including AI-generated material**, you should expect a failing grade for the course. Work on individual assignments should be done independently. If you have any questions about anything, please do not hesitate to reach out to the instructor or TA. We are here to help!

Policy on use of generative AI for class work

AI-based assistance, such as ChatGPT or Copilot, is considered unauthorized collaboration in this course when used in lieu of writing and interpreting in your own words. In your assignments, avoid anything that was not written directly by you. Including anything you did not write in your assignment without proper citation will be treated as an academic misconduct case and will be reported to the Office of Student Integrity. Use any interaction with an AI assistant as a *tool* to promote your learning experience, with your completed submitted product reflecting your interpretation and understanding of the material. <https://www.cc.gatech.edu/news/new-policies-navigate-role-ai-assistants-cs-courses>

GT Academic Honor Code

Georgia Tech aims to cultivate a community based on trust, academic integrity, and honor. Students are expected to act according to the highest ethical standards. Review [Georgia Tech's Honor Code](#) and the student [Code of Conduct](#). Any student suspected of cheating or plagiarism on a quiz, exam, or assignment will be reported to the Office of Student Integrity, who will investigate the incident and identify the appropriate penalty for violations.

Georgia Tech Values Statement

At Georgia Tech, we see different backgrounds and perspectives as essential to learning, discovery, and creation. We strive to remove barriers to student success, and to build a welcoming community where everyone has the opportunity to contribute to our mission. As outlined in our strategic plan (<https://strategicplan.gatech.edu/values>), we want to create an environment of holistic learning where all individuals can grow and learn to lead healthy, purposeful, impactful lives.

Student-Faculty Expectations Agreement

At Georgia Tech, we believe that it is important to strive for an atmosphere of mutual respect, acknowledgement, and responsibility between faculty members and the student body. [The Student-Faculty Expectations](#) articulate some basic expectations that you can have of me and that I have of you. In the end, simple respect for knowledge, hard work, and cordial interactions will help build the environment we seek. Therefore, I encourage you to remain committed to the ideals of Georgia Tech while in this class.

Accommodations for Students with Disabilities

If there are aspects of the instruction or design of this course that result in barriers to your inclusion or accurate assessment of achievement, please notify me as soon as possible so we can resolve the issue. Students with disabilities should also contact the Office of Disability Services (ODS), whose purpose is to collaborate with students, faculty, and staff to create a

campus environment that ensures all students have an equal opportunity to access the Georgia Tech community. ODS can be reached at 404.894.2563, dsinfo@gatech.edu, or <https://disabilityservices.gatech.edu>. Please contact me ahead of time to discuss any issues related to disabilities. I am happy to work with you.

Assessment of your learning

Research Project: Throughout the semester, you will work on a neuroscience research project related to the overall theme of the course. You will be working as part of a team of 2 students to gain realistic research experience, as researchers tend to work as part of a research team. As a group, you will decide on a topic, propose your topic, collect data, analyze it using the correct statistical analyses, and present your findings in oral and written form. You will submit drafts of specific sections of the project throughout the semester and receive feedback from your instructor, TA, and peers. As a group, you will present your final poster presentation to the class to gain experience presenting to a scientific audience (**see in-class presentation dates**). Finally, individually you will turn in a full APA-style manuscript of your research findings. More details will be provided throughout the semester (**see due dates; submit via Canvas**).

Written Components:

Research Proposal (individual activity): The written research proposal is a truncated NIH-style proposal that outlines the scientific rationale, significance, and experimental approach for your project. The proposal should include a 1-page Specific Aims section that presents the research question, hypothesis, and proposed aims. It should also include a minimum 2-page Research Strategy section covering the background (with at least 10 citations), significance, and overall research strategy for accomplishing the proposed aims.

Introduction (individual activity): To assist you with the process of writing your manuscript, each student will submit a detailed Introduction section before submitting their final manuscript. If Generative AI is used for this assignment, it must be acknowledged. **Copying and pasting from any GenAI prompt is unacceptable per the policy outlined above and will be penalized with a zero on the assignment and reported to the Office of Student Integrity.** GenAI is a tool you can use responsibly, but it is not a replacement for your own thoughts.

Methods, Results and Figures (group activity): To assist you with the process of writing your manuscript, each group will submit their Results section with figures before submitting their final manuscript. **Generative AI should not be used for this assignment.**

Final manuscript (individual activity): The capstone course is designed to be a culmination of all of your coursework and learning at Tech. We would like to assess **individual learning** through your final manuscript. This individual assessment is a common practice not just in capstone courses at Tech, but at many institutions. Being able to write in your own words and integrate information is an important skill for any graduate to have. If Generative AI is used for this assignment, it must be acknowledged. **Copying and pasting from any GenAI prompt is unacceptable per the policy outlined above and will be penalized with a zero on the assignment and reported to the Office of Student Integrity.**

Oral Components:

Research Proposal (individual activity): Each student will present their proposals to the class and will get feedback from instructors and peers. The proposal will comprise of their major research question, hypotheses, brief background, methods, expected results, and limitations. This presentation will be approximately 15 minutes in duration plus time for questions.

Final Poster Presentation (group activity): We will host a mini-symposium for each group to present their final project in the form of a scientific poster! Each group will give a presentation of their experimental results, including the background and significance, the hypothesis, the methods used, and the interpretation of the results.

Journal club presentation and 2-page analysis (individual activity): Students will choose primary research papers (not review!) related to the research. Students will summarize the main points in a “journal club” style presentation and lead discussions with their peers. The final submission should be a document in Microsoft Word (double-spaced, 2-page max) outlining the rationale for the study, the hypothesis, the approach and major findings, major conclusions, limitations of the study, and potential logical future experiment(s). The discussion and written analyses are intended to foster critical analysis of research papers and help prepare for the remaining oral and written assignments.

Course reflection (individual activity): The course reflection is for you to express what you

hope to learn and what you learned. Reflections are submitted every two weeks on Canvas.

Participation (individual activity): Participation is crucial in this intensive, research-based course. You are expected to attend the lecture and lab portions of this course for a truly engaging experience. Attendance is a large part of your participation grade and tardiness will be deducted from your attendance points. It is essential to engage with your lab partners and your instructors in-person and remotely to complete the tasks assigned and troubleshoot any problems. If you think of additional questions off-hours, or if it is your preference, you can always post questions at any time on Canvas. Discussion on Canvas is encouraged, and questions and answers posted there will count as in-class participation.

How to succeed in this class

Science is collaborative, innovative, and also hard! Experiments do not always go as planned, and we should never set out to “prove” our hypotheses. Negative data, confusing data, no data – these are all possible (if not, probable) outcomes for some of our experiments this semester. We will work together throughout the semester to get reliable data, and your success will depend on your willingness to engage deeply with the research and work in collaboration with your partners.

Assignment		Points
Research Project – Written (375 pts)	Topic/Hypothesis/Predictions	25
	Research Proposal	50
	Draft: Intro and Methods	50
	Draft: Results and Figures	50
	Final Research Paper	200
Research Project – Oral Presentation (275 pts)	Proposal Presentation	100
	Response to Peer Feedback	25
	Final Presentation	150
Journal Club Presentation (100 pts)	Presentation	50
	Written analysis	50
Readings and Group Discussion (75 pts)	Presentation	50
	Perusall	25
Course Reflections		25
In-lab participation (150 pts)	Punctuality	25
	In-class participation/engagement	100
	Clean-up	25
TOTAL		1000

Grading Scale

Your final grade will be assigned as a letter grade according to the following scale:

A 900-1000 points

B 800-899 points

C 700-799 points

D 600-699 points

F 0-599 points

Extra Credit

If an extra credit opportunity arises, we will inform you. **To be fair to all students, we cannot offer extra credit to an individual student that has not been offered to the entire class.**

Proposed Schedule: Subject to change; any changes will be posted on Canvas.

Wee k	Date	Lecture	Lab	Reading	What's Due
1	Mon 5/18	<i>Drosophila</i> history (KCB) Fly / Human Brain Analogs	Lab safety; <i>Drosophila</i> care and maintenance	Syllabus	
	Wed 5/20	<i>Drosophila</i> genetics (KCB)	Flybase; <i>Drosophila</i> mutants and crosses	Article 1	<i>Drosophila</i> mutant choices due 11:59 PM
2	Mon 5/25	NO CLASS	NO LAB	HOLIDAY	HOLIDAY
	Wed 5/27	Experimental design, <i>Drosophila</i> crosses (KCB)	Practice: Larval dissection, mounting		<i>Drosophila</i> crosses worksheet
3	Mon 6/1	How to read primary research (TCC)	Practice: confocal microscopy		
	Wed 6/3	How to design an experiment (KCB/TCC)	Data collection: larval dissection, mounting, imaging	Article 2	
4	Mon 6/8	Scientific presentation tips – how to tell a story (LGP)	Data collection: larval dissection, mounting, imaging		Experimental design plan
	Wed 6/10	Presentation Prep	Journal Club Presentations		Journal club presentation slides and analysis
5	Mon 6/15	Troubleshooting experiments – when science doesn't work (TCC/KCB)	Training: ImageJ, Data analysis Data collection: larval dissection, mounting, imaging	Article 3	
	Wed 6/17	p Hacking (KCB)	Data collection, image analysis		Draft: Methods
6	Mon 6/22	Tips for proposals (LGP)	Figure making, proposal presentation prep		Hypothesis and predictions
	Wed 6/24	Proposal Presentation Workshop (TCC/KCB)	Figure making, proposal presentation prep		
7	Mon 6/29	Proposal presentations; peer feedback	Proposal presentations; peer feedback		Upload proposal presentation, written proposal, and peer feedback
	Wed 7/1	Writing a scientific paper: more story telling (TCC/KCB)	Data Collection, Writing workshop (Introduction)		Response to peer feedback
8	Mon 7/6	Writing Introduction and Methods (TCC/KCB)	Data Collection, Writing workshop (Introduction/methods)		
	Wed 7/8	Writing Results/Discussion (TCC/KCB)	Data Collection, Writing workshop (Introduction/methods)		Draft: Introduction and Methods
9	Mon 7/13	How to analyze your data – statistics and interpretation (KCB)	Data Collection, Writing workshop (Results/discussion)		

	Wed 7/15	Data Collection: Imaging Writing workshop	Data Collection, Writing workshop (Results/discussion)		Draft: Results/Discussion, Intro/Methods revision
10	Mon 7/20	Data Collection: Imaging Writing workshop	Data analysis, Writing workshop		
	Wed 7/22	Final Poster Presentations	Final Poster Presentations		Final presentation file, Intro/Methods revision, Results/Discussion revision
11	Mon 7/27	Final written report	Final written report		Final written report

***All deadlines are 11:00 AM Eastern on Canvas unless otherwise noted**
